Re: Guidance for Resolution Plan Submissions of Foreign Triennial Full Filers; Board Docket No. OP–1817; FDIC RIN 3064–ZA38; 88 FR 64641 (Sep. 19, 2023)

Dear Ladies and Gentlemen:

Better Markets¹ appreciates the opportunity to comment on the above-captioned guidance (“Proposal”) issued by the Board of Governors of the Federal Reserve System (“Fed”), and the Federal Deposit Insurance Corporation (“FDIC”) (collectively “the Agencies”).² The Proposal sets forth the Agencies’ expectations for resolution plans submitted under Section 165(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”) by foreign-based Category II and III banking organizations³ (“foreign triennial full filers” or “covered firms”). If

¹ Better Markets is a non-profit, non-partisan, and independent organization founded in the wake of the 2008 financial crisis to promote the public interest in the financial markets, support the financial reform of Wall Street, and make our financial system work for all Americans again. Better Markets works with allies – including many in finance – to promote pro-market, pro-business, and pro-growth policies that help build a stronger, safer financial system that protects and promotes Americans’ jobs, savings, retirements, and more.

² Guidance for Resolution Plan Submissions of Foreign Triennial Full Filers, Board Docket No. OP–1817, FDIC RIN 3064–ZA38, 88 FED. REG. 64641 (Sept. 19, 2023), <https://www.federalregister.gov/documents/2023/09/19/2023-19268/guidance-for-resolution-plan-submissions-of-foreign-triennial-full-filers>.

³ Category II and III banking organizations generally have more than \$700 billion in total assets but are not considered global systemically important bank holding companies (“GSIBs”). Category III banking organizations generally have between \$250 billion and \$700 billion in total assets. 12 CFR § 252.5, Categorization of banking organizations, <https://www.ecfr.gov/current/title-12/section-252.5>.

finalized, this Proposal would replace the current guidance for foreign triennial full filers, issued in 2020.⁴

The Proposal describes the Agencies' expectations for resolution plan content, based on reviews of the plans that the covered firms submitted in 2021. Those submissions had several deficiencies, including inconsistent information on critical plan elements, excessively optimistic assumptions for the financial resources that would be available to a covered firm and its ability to access financial assistance at the time of bankruptcy, unreliable financial information, and a lack of detail and clarity on how the covered firm's U.S. resolution strategy and capabilities would interact with its home-country resolution strategy. Furthermore, the Agencies' recent experience with Credit Suisse, as well as Silicon Valley Bank ("SVB"), Signature Bank, and First Republic Bank, motivated and informed this Proposal.

We support several aspects of the Proposal, but also urge the Agencies to make some necessary and meaningful changes to strengthen it before finalization. First and most importantly, the proposed guidance should be changed to a legally enforceable rule, wherever practicable. The covered firms that are subject to this Proposal are large enough and pose a severe enough threat to the financial system that their resolution planning must be enforceable, especially the separability of legal entities in the bankruptcy process. Additionally, the full resolution plans should be updated more frequently than the proposed cycle and expectations should be better aligned for U.S. single point of entry ("U.S. SPOE") and U.S. multiple point of entry ("U.S. MPOE") filers. Finally, we agree that there may not be clarity on key aspects in time for incorporation in the next set of scheduled filings that are due July 1, 2024. Therefore, we support a one-time extension for the 2024 filers to allow for the inclusion of new and modified components resulting from this Proposal, with the goal of improving resolution planning and preparedness at covered firms as soon as possible.

BACKGROUND

At its core, the Dodd-Frank Act's objective was to eliminate too-big-to-fail and the need for taxpayer-funded bailouts. The large bank failures that occurred in spring of 2023 demonstrated, among other things, that resolution planning by the banks and the Agencies' process for assessing

⁴ Guidance for Resolution Plan Submissions of Certain Foreign-Based Covered Companies, 85 FED. REG. 83557 (Dec. 22, 2020), <https://www.federalregister.gov/documents/2020/12/22/2020-28155/guidance-for-resolution-plan-submissions-of-certain-foreign-based-covered-companies>.

these plans both need improvement. Clearly, too-big-to-fail is alive and well.⁵ Large and systemically important banks need more capital to improve their financial resilience during times of stress and support lending.⁶ They must also engage in more robust resolution planning and preparation to protect the financial system and taxpayers from the burden of more bailouts. While effective and credible resolution planning is critical for all systemically important firms, this Proposal is especially crucial because it addresses the unique legal issues, operational complexities, and other challenges posed by the failure of banking organizations with parent companies located in other countries.

Recent crisis periods have demonstrated that the larger and more complex a failing bank is, the more problematic its failure can be. Not only are there fewer potential acquirers that have the financial capability and size to take on the deposits and other operations of large banks, but large banks are also often much more intertwined with the broader financial system. Acting Comptroller of the Currency Michael Hsu highlighted this problem at a speech in 2022 with his comment that, “if a large regional bank were to fail today, the only viable option would be to sell it to one of the [global systemically important banks] GSIBs.”⁷ Large banks also commonly have a wide range of complex activities, in addition to traditional banking operations. Furthermore, navigating foreign countries’ unique legal and operational differences compounds the challenge for banking regulators in the event of a foreign-based bank failure and the risk to depositors and the public. Finally, technological advancements and new communication channels have complicated and challenged the execution of a smooth resolution process. As demonstrated in spring 2023, social media messages can reach millions of users instantaneously and can contribute to rapid deposit outflows and loss of franchise value in a failing bank. Therefore, to be successful, the resolution of a foreign-based large bank is unique and requires significant, careful, and comprehensive preparation *before problems arise* if a bank must be resolved without sparking widespread financial instability.

The Dodd-Frank Act’s requirement⁸ for large bank holding companies to develop “living wills” that would guide a financial institution’s failure through a bankruptcy proceeding, similar to other businesses in America, was intended to address this problem.⁹ While the filing of resolution plans is legally required by Section 165(d) of the Dodd-Frank Act, the specific content of these plans and other details such as their frequency is not specified in the Act. Therefore, this Proposal fills an important gap by providing clear and updated expectations to covered firms.

SUMMARY OF THE PROPOSAL

The Proposal provides guidance to covered firms on resolution plans that will be submitted in 2024 and beyond. It covers a range of topic areas that the Agencies believe would be important to a covered firm’s resolution strategy, including:

- **Group Resolution Plan:** Description of the impact of resolution of the covered firm’s global operations on its U.S. operations, including the extent to which assumptions, strategies, and capabilities differ between the U.S. and global plans.
- **Capital:** The ability of the covered firm to provide capital to all material entities to maintain operations, known as resolution capital adequacy and positioning (“RCAP”) and resolution capital execution need (“RCEN”).
- **Liquidity:** The ability of the covered firm to measure the stand-alone liquidity position of each material entity and ensure that liquidity is available to meet deficits, known as resolution liquidity adequacy and positioning (“RLAP”), and reliably estimate and meet liquidity needs prior to and in resolution, known as resolution liquidity execution need (“RLEN”).
- **Governance Mechanisms:** The ability of the covered firm to inform boards of directors and senior management of critical information on a timely basis and implement methods and strategies that achieve timely execution of the pre-determined resolution strategy, including potential legal challenges.
- **Operational:** The ability of the covered firm to successfully continue key functions without disrupting financial stability, including payment, clearing, and settlement activities; managing, identifying, and valuing collateral; running effective management information systems (“MIS”); administering shared and outsourced services; and establishing qualified financial contracts (“QFCs”).

⁸ 12 U.S.C. 5365(d), <https://www.govinfo.gov/link/uscode/12/5365>.

⁹ Kelleher & Medina, *Ending Too-Big-to-Fail by Breathing Life into “Living Wills”*, *supra* note 5.

- **Branches:** Description of how any U.S. branches that are considered material entities will continue critical operations after resolution as well as what cessation of those operations would mean for the U.S. financial system.
- **Legal Entity Rationalization:** The ability of the covered firm to plan and arrange its legal entities and business lines that best achieves a smooth continuation of its activities over time, to facilitate the potential sale or transfer of material entities during periods of stress as well as clean lines of ownership and clean funding pathways between the foreign parent and its U.S. entities.
- **Separability:** Identification of discrete U.S. operations that could be sold or transferred in resolution, as well as a discussion of the covered firm’s expected actions in a resolution situation, including the population of a data room with information pertinent to a potential divestiture of the identified separability options, and potential consequences on U.S. financial stability of each option.
- **Insured Depository Institution (“IDI”) Resolution:** The ability of the covered firm to implement a strategy to sell or transfer any U.S. IDI’s assets and deposit liabilities to one or more other entities without negatively impacting economic conditions or financial stability. As described earlier, the FDIC has a separate current rule¹⁰ as well as a proposed rule¹¹ with specific informational expectations for IDI resolution planning.
- **Derivatives and Trading Activities:** The ability of the covered firm to stabilize and control the risk within its derivatives and trading portfolio without disrupting financial markets.

For each area, the Proposal provides instructions for information that covered firms should include in a resolution plan. The Agencies do not state a preference for a specific resolution strategy; instead, they outline different expectations for submissions in each area based on whether the firm has selected a U.S. SPOE or U.S. MPOE strategy. As we explain in detail later in this letter, expectations for firms that select a U.S. MPOE strategy are lacking in some areas. We recommend that the expectations for firms that select a U.S. MPOE strategy be better aligned with those for firms that select a U.S. SPOE strategy.

Finally, the Proposal explains that the Agencies want the covered firms’ 2024 resolution plans to include the components in the proposed guidance. Consideration of comments and finalization of this Proposal will likely continue into 2024 and may not allow covered firms adequate time to incorporate the new Proposal’s guidance into the 2024 plan submissions. The

¹⁰ 12 CFR 360.10, Resolution Plans Required for Insured Depository Institutions With \$50 Billion or More in Total Assets, <https://www.ecfr.gov/current/title-12/section-360.10>.

¹¹ *Resolution Plans Required for Insured Depository Institutions With \$100 Billion or More in Total Assets; Informational Filings Required for Insured Depository Institutions With at Least \$50 Billion But Less Than \$100 Billion in Total Assets*, 88 FED. REG. 64579, FDIC RIN 3064–AF90 (Sept. 19, 2023), <https://www.federalregister.gov/documents/2023/09/19/2023-19266/resolution-plans-required-for-insured-depository-institutions-with-100-billion-or-more-in-total>.

Agencies are therefore considering an extension for the 2024 plan submissions, not to exceed one year after the proposed guidance is published in final form. We support this extension and recommend that it be 6 months in length.

This Proposal is one of several current proposals on the resolution process that are being considered and on which the banking regulatory agencies have requested comment. The Fed and FDIC have a complementary proposal regarding the process and expectations for resolution plans for domestic bank holding companies.¹² Better Markets has addressed this proposal in a separate comment letter.¹³ The FDIC also has a proposed rule related to insured depository institution resolution plans,¹⁴ which Better Markets has addressed in a separate comment letter.¹⁵

SUMMARY OF COMMENTS

We applaud the Agencies' efforts with the Proposal, as it provides needed clarity and transparency on expectations for covered firms' resolution plans. It also makes several improvements that will strengthen covered firms' resolution plans, relative to the 2020 guidance. For example:

- **Capital:** RCAP is included, after being removed between the proposed and final 2020 guidance for covered firms. This is important because the RCAP analysis includes capital assessment for the covered firms' U.S. material entities during the runway period immediately prior to resolution. While we believe that capital levels at systemically important banks need to be higher, we are encouraged that the RCAP concept is now included among resolution plan components for covered firms.
- **Liquidity:** RLAP is included, also after being removed between the proposed and final 2020 guidance for covered firms. RLAP is critical to assess the liquidity positions of U.S. entities during the runway period prior to resolution. The Proposal also includes a new component relating to liquidity capabilities that directs covered firms to estimate and maintain sufficient liquidity in the U.S. to avoid possible difficulties or delays that may arise when moving liquidity among a firm's entities, especially during a stressed situation.

- **Operational:** Directions related to MIS and QFCs that were not included in the 2020 guidance have been added, and directions related to shared and outsourced services were enhanced.

All of these features should help to strengthen the operational readiness for covered firms in resolution.

However, several aspects of the Proposal must be improved to achieve the desired financial stability outcomes in the event of the failure of a covered firm. Our specific comments are summarized as follows:

- As much of the Proposal as practicable should be incorporated in rules, not continued as guidance, so that it is legally binding and enforceable. In 2018, the federal banking regulators issued a joint statement on guidance that undermined the effectiveness of banking supervision and highlighted the limited authority supporting supervisory guidance. This was made into a rule in 2021, further weakening the important role that guidance should play in the supervision process.¹⁶ Given the Agencies' recent focus on weakening the role of guidance; the importance of resolution planning; and the size, scope, and financial stability implications that are involved, guidance is simply inadequate.
- The frequency of resolution plan submissions should be increased. The banking regulators have emphasized that having current information in a resolution plan is critical to a plan's success. Furthermore, the covered firms that will create resolution plans based on the content in this Proposal are large and interconnected within the financial system. The risk that these firms present to the financial system, economy, and American people, and the likelihood that components of the plans could materially change within three years requires a schedule of more frequent updates. The growth and increased risk profile at both Lehman Brothers ("Lehman") and SVB, for example, in the years leading up to their failures clearly illustrate how quickly large banks can change. Therefore, we believe that an update once every two years would be reasonable and prudent and would also align with the FDIC's proposed two-year filing cadence for IDI resolution plans. The Agencies should also consider key information for which even more frequent updates are needed.
- The transparency of resolution plans must be increased by making more elements public. Currently, the public versions of resolution plans are sparsely populated and generally provide less information than already-public 10-K or quarterly Call reports. By increasing public disclosure, financial market participants and the American public will have the information required to exert appropriate market discipline on CIDs and independently assess the regulators' determination of plan credibility. In particular, we recommend increased public disclosure on resolution plans related to potential acquirers. This advance planning would reduce the reliance on GSIB acquisitions, especially in situations with unexpectedly short preparation time such as SVB.

¹⁶ Board of Governors of the Federal Reserve System, *Role of Supervisory Guidance*, 86 FED. REG. 18173 (Apr. 8, 2021), <https://www.federalregister.gov/documents/2021/04/08/2021-07146/role-of-supervisory-guidance>.

- The Agencies should reconsider expectations for covered firms that select a U.S. MPOE strategy and align them with expectations for firms that select a U.S. SPOE strategy. The Proposal does not provide specific expectations related to capital for covered firms that select a U.S. MPOE strategy. We disagree with this approach. The Dodd-Frank Act states that the resolution plans shall facilitate a rapid and orderly resolution of the covered firm, without distinguishing between an SPOE or MPOE strategy. It is not prudent or in the best interest of financial stability to simply assume that material entities within a holding company structure can be discontinued in a failure situation, especially if the failure occurs during a period of distress in the broader economy or financial system and be orderly. At a minimum, capital plans are needed for each material entity to preserve its value at least during the transition period between the firm’s failure and the time when it can be sold or closed in an orderly way. Therefore, we ask that the Agencies reconsider the assumptions made in the Proposal and align expectations for U.S. SPOE and U.S. MPOE firms for *each plan component*. Additionally, we urge that direction be developed by the Agencies for derivatives and trading activity *at both U.S. SPOE and U.S. MPOE firms*.
- The Agencies should develop an independent committee to advise and support resolution efforts. A resolution planning advisory committee could consist of bankruptcy scholars, lawyers, and judges who provide valuable expertise and guidance, complementing the expertise at the Agencies to enhance and strengthen the resolution planning process.
- The submission date for covered firms’ 2024 resolution plans should be extended to 6 months after the Proposal’s finalization date. We support honoring the process for plan development and allowing a reasonable time for submission after finalization, but this must be balanced with the need for plans to be completed in a timely manner to support financial stability. Six months is therefore preferable to the 12 months under consideration.

COMMENTS

I. AS MUCH OF THE PROPOSAL AS PRACTICABLE SHOULD BE INCORPORATED IN RULES, NOT CONTINUED AS GUIDANCE, SO THAT IT IS LEGALLY BINDING AND ENFORCEABLE.

In 2021, the federal banking regulators – at the urging of the banking industry -- adopted a final rule that sought to clarify the distinctions between rules and guidance. In the process, that rule severely undermined the value of supervisory guidance, by providing that it can only be used to “advise the public prospectively of the manner in which the agency proposes to exercise a discretionary power” and does not create binding legal obligations.”¹⁷ Better Markets strongly opposed that final rule, stating that it would “make it more difficult for bank supervisors to hold banks – including the largest banks, which can pose a direct threat to financial stability and the economic wellbeing of the public when badly managed – accountable for dangerous practices,

¹⁷ *Id.*

poor management, and ineffective oversight by bank boards of directors.”¹⁸ In fact, these concerns materialized in the supervisory actions that preceded the failure of SVB. As detailed in the Fed’s review of supervision and regulation at SVB, the delays and lack of action by supervisors are directly attributed to the shift in supervisory culture following the adoption of the “principle that supervisory guidance does not have the force and effect of law.”¹⁹

For this Proposal, considering the size, scope, and financial stability implications that are involved, guidance is simply inadequate. The concerns that Better Markets expressed during the comment period for the rule on the role of supervisory guidance are directly applicable to resolution plans. These plans are vitally important and consequential for the protection of the American people and financial stability. Supervisory processes for promoting credible and workable resolution plans through assessments of banks’ practices have been weakened when they are framed in guidance. Consequently, the contents of firms’ resolution plans, and the expectations of the Agencies for resolution preparedness, should be implemented as a rule, so that it will be legally binding and enforceable.

II. THE FREQUENCY OF RESOLUTION PLAN SUBMISSION SHOULD BE INCREASED.

Currently, covered firms are required to submit a resolution plan to the Fed and FDIC once every three years. The content of these documents alternates between a “full” resolution plan in one three-year cycle and a “targeted” resolution plan, containing less information, in the next three-year cycle. In other words, covered firms only file a full resolution plan *once every six years*.

We recommend that at a minimum the filing cycle be increased to once every two years, alternating between a full resolution plan in one two-year cycle and a reduced “targeted” resolution plan in the next two-year cycle. This would match the current FDIC proposal for resolution plans for covered insured depository institutions with \$50 billion in total assets or more. It also aligns with Better Markets’ recommended filing cadence for domestic triennial full filers, in response to the Agencies’ Proposal for those firms’ resolution plans.²⁰ In addition, the agencies should undertake an evaluation of key information that is needed even more frequently, such as annually, to maximize the usefulness of the resolution plans and modify the expectations accordingly.

Clearly, current information in a resolution plan is essential. The covered firms submitting resolution plans are large and interconnected, and it is critical that these plans be as up to date as possible. Furthermore, given the often-rapid pace of growth and change at covered firms,

¹⁸ Better Markets Comment Letter, *Role of Supervisory Guidance, Notice of Proposed Rulemaking* (Jan. 4, 2021), <https://bettermarkets.org/wp-content/uploads/2021/07/Better-Markets-Comment-Letter-on-Notice-of-Proposed-Rulemaking-Role-of-Supervisory-Guidance.pdf>.

¹⁹ Board of Governors of the Federal Reserve System, *Review of the Federal Reserve’s Supervision and Regulation of Silicon Valley Bank* 35–36 (Apr. 2023), <https://www.federalreserve.gov/publications/files/svb-review-20230428.pdf>.

²⁰ Better Markets Comment Letter, *supra* note 13.

information that is at least three years old (and could be up to six years old) is almost presumptively useless to the Agencies in the event of a resolution.

To illustrate, the Fed’s Office of the Inspector General (“OIG”)²¹ detailed how SVB’s asset size *doubled twice* in just a 5-year period, growing from about \$50 billion in 2018 to more than \$100 billion in 2020, and exceeded \$200 billion in 2022. SVB’s concentrations of funding and investments also increased rapidly, including a more than 400 percent jump in the bank’s securities portfolio. While the OIG’s report focused on ineffective day-to-day management of new activities, growth, and increasing complexity, it also clearly shows a need for updated assessments of the implications of SVB’s rapid change for its resolution plan. Similarly, Lehman²² grew rapidly and significantly in just a few years prior to its failure, aggressively expanding into new and risky business lines and relying on unstable short-term funding sources – all factors that should certainly be included in a resolution plan but could be missed with longer filing cycles.

III. THE TRANSPARENCY OF RESOLUTION PLANS MUST BE INCREASED BY MAKING MORE ELEMENTS PUBLIC.

In addition to providing critical information to the Agencies, the resolution planning process serves an important function of contributing to public confidence in the health of the banking system. However, the current public versions of resolution plans²³ are very sparsely populated and generally provide less information than already-public 10-K or quarterly Call reports.

By increasing public disclosure, financial market participants and the American public will have the information required to exert appropriate market discipline on firms. Academics and former government officials have made similar recommendations to make living wills public. For example, economists at the Federal Reserve Bank of New York state,

By collecting and publicly revealing elements of these [“living wills”], regulators are likely to have a marked effect on information production and security prices. Market participants will have an increased ability to understand the losses they potentially face if their borrowers and

²² Rosalind Z. Wiggins, Thomas Piontek & Andrew Metrick, *The Lehman Brothers Bankruptcy A: Overview*, Yale Program on Financial Stability Case Study 2014-3A-V1, YALE SCHOOL OF MANAGEMENT (Oct. 1, 2014), <https://ssrn.com/abstract=2588531>.

²³ FDIC and Financial Regulatory Reform – Title I and IDI Resolution Plans, <https://www.fdic.gov/resources/resolutions/resolution-authority/resplans/index.html>.

counterparties fail—and thus will have an increased incentive to push for changes that make the firm less likely to fail in the first place.²⁴

Former FDIC Vice Chairman Tom Hoenig also supported making living wills public.²⁵ Increased transparency would give all market participants an opportunity to be informed and as a result increase financial stability.

We also recommend increased public disclosure related to covered firms' plans for a viable resolution strategy, including a description of potential acquirers. The Proposal accurately states that the group of potential acquirers becomes smaller as the size of an IDI increases. Furthermore, potential market concentrations and antitrust concerns, operational complexities, and the need to maintain the continuity of banking activities that are critical to financial stability can all complicate the resolution process and limit the pool of viable acquirers. Therefore, it is critical that the covered firms provide enough detail to clarify the robustness of their resolution plan so that a default to a GSIB acquisition is not assumed.

IV. THE AGENCIES SHOULD RECONSIDER EXPECTATIONS FOR COVERED FIRMS THAT SELECT A U.S. MPOE STRATEGY AND ALIGN THEM WITH EXPECTATIONS FOR FIRMS THAT SELECT A U.S. SPOE STRATEGY.

For each component within a firm's resolution plan, the Proposal provides specific expectations for firms that select a U.S. SPOE strategy and for firms that select a U.S. MPOE strategy. In some cases, however, the expectations for firms that select a U.S. MPOE strategy are considerably lighter, less costly, or nonexistent. We believe that this approach is misguided and not aligned with the overall goal of having credible resolution plans that support financial stability. The Dodd-Frank Act specifically states that resolution plans shall result in a rapid and orderly resolution for the covered firms. With the current Proposal, it appears that the Agencies are favoring the U.S. MPOE strategy with lighter requirements, relative to the U.S. SPOE strategy. We urge the Agencies to reconsider the assumptions made in the Proposal and better align expectations for U.S. SPOE and U.S. MPOE firms *for each plan component*.

More specifically, the Proposal contains several expectations related to RCAP and RCEN for firms that select a U.S. SPOE strategy. However, the Proposal states, "The agencies do not propose issuing guidance on this topic [capital] to firms whose Plans contemplate a U.S. MPOE resolution strategy." The reason given for a lack of guidance is that "a U.S. MPOE strategy assumes most material entities do not continue as going concerns upon entry into resolution." We disagree with this approach. It is not prudent to assume that material entities within a holding company structure can simply be sold or discontinued in a failure situation without causing harm

²⁴ Hamid Mehran and Lindsay Mollineaux, *Corporate Governance of Financial Institutions*, Federal Reserve Bank of New York Staff Report no. 539 (Jan. 2012), http://www.newyorkfed.org/research/staff_reports/sr539.pdf.

²⁵ Mayra Rodriguez Valladares, *Living Wills Still Alive for Regulators*, NY TIMES DEALBOOK (Nov. 6, 2014), <http://dealbook.nytimes.com/2014/11/06/living-wills-still-alive-for-regulators/>.

to the economy or financial system, especially if the failure occurs during a period of distress in the broader economy or financial system.

Regarding **Derivatives and Trading Activities**, the Proposal states that covered firms engage in less activity than U.S. GSIBs, which we agree is generally true at this time. Nevertheless, even if exposure to derivatives and trading activity is currently low, it may not stay low in the future. Therefore, irrespective of whether a firm elects a U.S. SPOE or U.S. MPOE strategy, the Agencies should include an expectation that resolution plans contain an orderly wind-down analysis if the net derivative position exceeds a threshold amount, with the goal of maintaining stability and public confidence.

V. THE AGENCIES SHOULD DEVELOP AN INDEPENDENT COMMITTEE TO ADVISE AND SUPPORT RESOLUTION EFFORTS.

As Better Markets has proposed in prior work,²⁶ the Agencies should consider developing a resolution planning advisory committee consisting of independent bankruptcy scholars, lawyers, and judges to provide expertise and guidance to enhance and strengthen the resolution planning process. This committee would not replace the responsibilities and expertise at the Agencies; instead, it would complement and strengthen it.

Similar to the FDIC's other advisory committees²⁷ focusing on key areas such as economic inclusion, community banking, systemic risk, and state regulations, an advisory committee on resolution would make the resolution plan assessment process more robust. In turn, this would increase the credibility of and public confidence in the plans themselves.

VI. THE SUBMISSION DATE FOR COVERED FIRMS' 2024 RESOLUTION PLANS SHOULD BE EXTENDED TO SIX MONTHS AFTER THE PROPOSAL'S FINALIZATION DATE.

While it is crucial for the Agencies to receive and be able to assess resolution plans for all covered firms, we believe that the direction provided in this Proposal is a significant improvement from the current state and therefore we support allowing a reasonable time for submission of 2024 plans after the Proposal becomes final.

We believe that six months after the Proposal becomes final is a reasonable time for this extension, balancing the need for plans to be completed in a timely manner to support financial stability with the need for firms to prepare any new information.

An extension of any more than six months is excessive for multiple reasons. Most, if not all, covered firms have submitted resolution plans in the past and received feedback, so this process

²⁷ FDIC Advisory Committees, <https://www.fdic.gov/about/advisory-committees/>.

is not new, and firms are not starting from scratch with their resolution plans. In addition, this Proposal is public information, so covered firms that desire to prepare ahead of time for changes can assess the Proposal and begin to work on any additions that may be necessary in the next plan.

CONCLUSION

We hope these comments are helpful for finalizing the Proposal.

Sincerely,

Dennis Kelleher
